

PLC Control system & Fieldbus

PLC Control system & Fieldbus

Automation Solutions Sweden AB has very high skills in programming of PLC systems. We have as of today greatest experience of systems like Siemens S7-300, 400 series where we use BLK, STL, SCL and Rockwell Compact + Control Logix where we use LAD, SCL and SQD.

Fieldbus is common today and clearly the most convenient solution for all types of communication between instruments and machines. Fieldbuses that we most commonly implement and use are Ethernet I/P, Profibus, DeviceNet and Modbus.
